```
The present invention describes an anti-CD16A antibody (I) comprising a VH domain comprising complementarity determining regions (CDRs) derived from the mouse 308 antibody heavy chain and a VL domain comprising CDRs derived from the mouse 308 antibody light chain or a humanised anti-CD16A antibody (II) that lacks effector function and comprises all six CDRs of mouse antibody 308. Also described is a method (MI) for reducting a chale described is a method (MI) for reducting a chale described from a mammal in need of such reduction, which involves administering to the mammal a CD16A binding protein comprising comparate and particle from a human 1gG heavy chain, where the Fc region lacks effector ligand. (I) and (II) have haemostatic, antirheumatic, antianaemic, vasotropic, is modified to reduce binding to an Fc effector ligand. (I) and (II) have haemostatic, antirhilammatory. Cantianaemic, ophthalmological and antiasthmatic activities. (I) or (II) is useful for reducing a deleterious immune response in a mammal which involves administering to the mammal (I) or (II). The deleterious immune cuseful for reducing a deleterious immune response is an inflammatory response caused by autoimmune disease such as claropathic thrombocytopenic purpura (ITP), rheumatoda arthritis (RAA), syldcome, systemic vascultis, Goodpasture's syndrome, autoantibody trigged urticaria, pemphigus, vascultis (MS), psoriatic arthritis, ankylosing spondylitis, Sjogrem's syndrome, (MS), psoriatic arthritis, ankylosing spondylitis, Sjogrem's entenents (ITM) therasor entenents (MS), psoriatic arthritis, ankylosing spondylitis, Sjogrem's entenents (ITM) and and alleric asthman and alleric asthman and alleric asthman the normal seconds immunoslobulin (IVIG) therapy e.g., alleric asthman Then are entenents with intravenence immunoslobulin (IVIG) therapy e.g., alleric asthman Then alleric asthman and alleric asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunoglobulin (IVIG) therapy e.g., allergic asthma. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel anti-CD16A antibody comprising complementarity determining regions derived from mouse 3G8 antibody and humanized anti-CD16A antibody that lacks effector function, useful for treating deleterious immune response.
psoriatic arthritis; ankylosing spondylitis; Sjogren's syndrome;
Reiter's syndrome; Kowasaki's disease; polymyositis; dermatomyositis;

anti-protein C monoclonal antibody HPC-4 heavy chain variable region. HPC-4 recognises the activation peptide region (AAR88106) of the heavy chain of protein C, a vitamin K-dependent plasma protein zymogen. Protein C is converted to activated protein C (APC) by cleavage between the Arg-Leu amino acid contained within the activation peptide sequence. HPC-4 prevents protein C activation to APC by binding to this region. The DNA sequences encoding the variable regions of the heavy and light chains of the antibody (AAT09299-302) were used to construct humanised antibodies using the PCR primers AAT09303-9. The humanised antibodies are useful as inhibitions of coagulation and can be used for the treatment of tumours by protein C to APC
                                                                                                                                                                                                     Calcium-binding monoclonal antibody immunoreactive with Protein C - inhibits Protein C anticoagulant activation by thrombin-thrombomodulin, e.g. for treating tumours.
                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of the mature peptide from the murine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprising different groups of peptides each group being capable of raising, in an infected individual, an antibody able to bind to the hypervariable 1 (HVR1) region of the envelope protein E2 of the infecting HCV strain. The different groups of peptides are administered sequentially to raise antibodies, helper T-lymphocytes, and cytotoxic T-lymphocytes which are cross-reactive to the HVR1 region of the infecting HCV. The vaccines are useful for preventing and treating chronic HCV infections. ABG67186-ABG67189 represent variable regions of human IgG1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a hepatitis C virus (HCV) vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hepatitis C virus (HCV) vaccines able to raise antibodies, helper 'lymphocytes and/or cytotoxic T lymphocytes able to bind to the hypervariable 1 region of the infecting HCV strain.
                                                                   Hepatitis C virus vaccine; HCV; hypervariable region 1; HVR1; envelope protein E2; antibody; helper T-lymphocyte; IgG1; cytotoxic T-lymphocyte; HCV infection; virucide; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 121;
                                  Human IgG1 antibody heavy chain variable region 15H4VH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 84.5; DB 5;

S54228
Ig mu heavy chain V region precursor - sheep (fragment)
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Decies: 08-Jul-1995 #sequence_revision 03-Aug-1995 #text_change 23-Jul-1999
C;Accession: S5428
R;Duffour, V.; Nau, F.
submitted to the EMBL Data Library, April 1995
A;Description: Sheep immunoglobulin mu heavy chain variable region sequence.
A;Reference number: S54228
A;Accession: S54228
A;Accession: S54228
A;Accession: UNIPARC:UPIO000116726; EMBL:Z49169; NID:9794095; PIDN:CAA89038.1; PI
C;Superfamily: immunoglobulin V region; immunoglobulin homology
C;Keywords: immunoglobulin homology <IMM>
                                   A, Description: Dominance of clonotypic patterns and variable gene usage of anti-DNA auto A, Reference number: 831509
A, Reference number: 831509
A, Accession: 831514
A, Status: preliminary
A, Molecule type: mRNA
A, Residues: 1-128 < CIRA
A, CROSS-references: UNIPARC: UPIO0001160FB; EMBL: X69862; NID: g33086; PIDN: CAA49496.1; PID

X. The amino acid sequence of the heavy chain variable region of McE.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gerber-Jenson B., Kazin A., Kehoe J.M., Scheffel C., Erickson B.W.,

    J. Tamunol. 126:1212-1216(1981).
    MISCELLANEOUS: This chain was derived from a monoclonal IgM cryoimmunoglobulin.
    SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

"Cytochrome P450s from the malaria vector, Anopheles gambiae.";

"Cytochrome P450s from the malaria vector, Anopheles gambiae.";

submirted (SER-2004) to the EMBL/GenBank/DDBJ databases.

-! SIMILARITY: Belongs to the cytochrome P450 family.

EMBL; AY745209; AAU93476.1; -; mRNA.

Submitted (APR-2004) to the EMBL/GenBank/DDBJ databases.

-I-CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.

-I-SIMILARITY: Belongs to the cytochrome P450 family. REMBL; AAAB01008811; EAL41693.1; -; Genomic_DNA.
